

Scope of Project

- By providing smart wireless sensor network for an agriculture field, monitoring various parameters such as below:
 - Temperature and humidity
 - Soil moisture

- We are providing Irrigation method for distribution of water to agriculture field in the whole farm or as per requirement of crop.

Scope of Project

- Using open weather api also collect data about current and forecasted weather conditions.
- System fully organized in such manner user can access it remotely or within a field.
- For this we are going to provide a web app for end user.
